Hello,

The following submission has been created.

Track Name: Track 6 Cloud and Edge Computing

Paper ID: 12

Paper Title: Machine Learning-Based Network Load Prediction for Edge Server

Abstract:
Abstract– With the fast growth in Internet of Things (IoT) devices, smart applications, and real-time data processing requirements, edge computing has become a crucial thing to reduce latency and improve system performance. However, maintain network load efficiently in edge servers remains a difficult challenge due to the highly dynamic nature of network traffic. This paper describe a comprehensive machine learning-based approach for predicting network load on edge servers using historical traffic data. This system uses multiple machine learning and deep learning algorithms like Linear Regression, Decision Tree, Random Forest, and Long Short-Term Memory (LSTM) networks to analyze time-series data and forecast future load conditions.

Authors:
- vijendra.kumar.cs28@iilm.edu (Primary)
- mayank.bhardwaj2.cs28@iilm.edu
- shourya.singh2.cs28@iilm.edu
- rajya.vardhan.cs28@iilm.edu
- vicky.raj.cs28@iilm.edu
- prakhar.consul@iilm.edu

Secondary Subject Areas: Not Entered

Submission Files:
BTP2CSE065 Research Paper (1) (1).docx (2 Mb, Fri, 17 Apr 2026 09:42:00 GMT)

Submission Questions Response:
1. All authors are added during the submission process on CMT Portal.
Agreement accepted
2. I confirm that I have removed all author names, affiliations, and any other identifying information from the manuscript to comply with the double-blind review process.
Agreement accepted
3. I confirm that I am not an author or corresponding author on more than 6 papers. I understand that exceeding this limit will result in desk rejection of my submissions.
Agreement accepted
4. Paper Formatting Compliance
Agreement accepted

Thanks,
CMT team.
